1. INTRODUCTION

1.1 Project Objectives

The objective of this project was to reduce or remove the adverse effects of past coal mining activity at eight separate project locations southeast of Great Falls in Cascade County, Montana. The major items of work performed varied according to individual site reclamation requirements but include one or more of the following: topsoil removal and replacement, preparation of spoil deposition areas, closing adits, moving and placing mine spoils, installing drainage structures, revegetating disturbed areas, removal and disposal of debris, constructing a well and installing a new pump and piping, construction of an infiltration pond and installing fence.

The Schedule VIII - Centerville 'C' site was deleted from the project by Change Order No. 1. The Lorang Reclamation site and Johnson Field Neutralization site were added to the project by Change Orders No. 1 and 2.

1.2 Site Description

Centerville Site

The Centerville site consisted of six non-contiguous mines located on the west side of the Stockett Highway in the SE4 of Section 24, NE4 Section 25 in T19N, R4E and in SW4 Section 19, NW4 Section 30 in T19N, R5E. The adits, subsidences and associated spoil piles were situated on the steep slope of the north-south trending gulch approximately 0.8 miles south of Centerville. Numerous waste piles scattered around the site, particularly on the lower, flatter slopes, indicated earlier coal load-out locations. Abandoned mine roads provided access to the waste piles and adits.

Chicken Coulee Site

The Chicken Coulee site is 6.5 miles southeast of the Eden Bridge in the SW4 of Section 36, T17N, R3E. A collapsed adit with associated waste pile and a subsidence immediately uphill of the adit comprised the remnants of past mining activity. Seasonal adit drainage in contact with the coal waste pile had created a devegetated area below the mine. Access to the site is difficult due to spring activity, rough road conditions and the remote location of the prospect.

Cottonwood Creek Site

The Cottonwood Creek site is located 2.5 miles south of Stockett, Montana in T18N, R5E section 7 (SW4, SE4). The adit and waste pile were situated on the south slope of a ravine approximately 1,000' east of the Cottonwood Coulee Road. Also associated with the mine disturbance were the remnants of a powder magazine, mule barn and debris from old mine buildings. Mine drainage reported to be flowing from the adit was not confirmed.

McKamey Ranch Sites

The three scattered sites comprising the McKamey Ranch reclamation site are located near the Smith River in T17N, R3E. Site A is located in Section 30 (NE4, NE4) on a steep slope approximately 1,000' west of the McKamey residence. The single prospect was in a rock outcrop and the adit was partially open. Coal spoils at the site were insignificant and required no reclaiming. Site B is in Section 20 (NE4, NE4) approximately 1 1/4 miles northeast of the ranch. The two adits at this site were partially open with no significant spoils accumulation. Site C is located in Section 30 (NE4, SE 1/4). The single adit at this site was partially opened and situated in an area heavily overgrown with trees and brush approximately 3/4 mile from the ranch. Access to all sites was limited.

Neil Creek Site

The Neil Creek site is located in a gulch 3/4 of a mile south of Montana Highway 87 adjacent to a private road. The private road intersects Highway 87 1.9 miles west of Armington Junction. The two adits are situated on a steep slope in T18N, R6E, Section 2 (NE 1/4) and T19N, R6E, Section 39 (SE4). The adits were partially open.

Number Five Coulee Site

The Number Five Coulee site is located 3.1 miles south of Centerville in Number Five Coulee, T19N, R4E section 35. The site consists of five noncontiguous prospects. The adits are collapsed and have subsidences above them. Associated with the mines are four waste piles and scattered mining debris.

Tracy Site

The Tracy site is located 1.25 miles northeast of Tracy, Montana at the base of a north slope in T19N, R5E in Section 7. There are two adits that are partially collapsed at the toe of the slope. Six waste piles, mine debris and mine drainage are associated with the site.

Miners Centennial Park Well

The location of the well is in the Miners Centennial Park, Centerville, Montana in T19N, R5E, Section 19 (NE4).

Lorang Site

The Lorang site is located in T17N, R4E Section 4 at the base of a hillside on the north bank of Ming Coulee. The site is approximately 1.5 miles northeast of Eden and is accessed from Frank Road. The site consisted of a single open adit and small waste pile. The site was added to the project by Change Order No. 2.

Johnson Field

The Johnson Field site is located in T19N, Section 7 below the Johnson Wetlands. Approximately 8 acres of a cultivated field was barren due to low pH soils, a result of acid mine water accumulation before the wetland was constructed in 1987. This site was added by Change Order No. 3.

1.3 Maps Showing Mine Locations

Maps showing the mine locations are included in Attachment 9.

2. RESPONSIBLE PARTIES

2.1 Prime Contractor

The prime contractor was selected by submitting the lowest bid:

Shumaker Trucking & Excavating
P.O. Box 1442
Great Falls, MT 59403

2.2 Reclamation Engineer

The reclamation design and engineering plans were prepared by:

Hydrometrics, Inc.
2727 Airport Road
Helena, MT 59601

2.3 Quality Control Inspection

The original plans and specifications for reclamation of the Cascade County Small Prospects AMR Project were engineered and prepared by Hydrometrics, Inc. Prior to construction of the project, a change in consultants occurred and the project was assigned to Robert Peccia & Associates. The contract administration, construction observation and project activity documentation was consequently performed by RPA personnel.

Resident Engineer, Dale Wells
Robert Peccia & Associates
P.O. Box 5653
Helena, MT 59604

2.4 DSL-ARMB Coordination

The AMRB Project Manager was Dale Herbort.

3. CHRONOLOGICAL LISTING OF EVENTS

3.1 Pre-bid Conference

The pre-bid conference agenda was presided over by representative(s) from DSL-AMRB and Hydrometrics, Inc. on June 15, 1990. A conference summary is unavailable for this report.

3.2 Bid Date

The bid date for this project was June 28, 1990.

3.3 Three Lowest Bids

Only one bid was submitted for this project:

Shumaker Trucking and Excavating
P.O. Box 1442
Great Falls, MT - bid amount $148,336.46

3.4 Contract Award

The contract was awarded to the lowest bidder, Shumaker Trucking and Excavating. A copy of the Bid Proposal is in Attachment 1.

3.5 Notice of Award

The Notice of Award was dated on July 29, 1990. A copy is include in Attachment 4.

3.6 Notice to Proceed

The Notice to Proceed was dated on July 30, 1990. A copy is included in Attachment 4.

3.7 Preconstruction Conference

The Preconstruction Conference agenda was presided over by representative(s) from DSL-AMRB, and Robert Peccia & Associates on July 30, 1990. A listing of individuals in attendance, the conference agenda and a meeting summary is included in Attachment 4.

3.8 Construction Start-up

Project construction was tentatively scheduled to begin on August 6, 1990. Actual construction began on August 8, 1990.

3.9 Change Orders and Approval Date

Three Change Orders were approved on this project resulting in a total contract price reduction of $10,838.96. Change Order No. 1 was approved by AMRB on August 6, 1990; No. 2 on September 28, 1990; and No. 3 on February 24, 1991. Copies of the project Change Orders are included in Attachment 2.

3.10 Work Stoppages

A work stoppage was authorized during the Preconstruction Conference to allow a 30 day suspension of contract time between project work phases. The temporary work shutdown was issued in order to accommodate the contractor's schedule and was in effect from September 12, 1990 to october 15, 1990.

3.11 Payment Requests

Three Pay Requests were submitted by the Contractor and approved by DSL-AMRB. Copies of the Pay Requests are included in Attachment 3.

Firm	Amount	Date
Shumaker Trucking & Excavating	$62,450.34	9/19/90
Shumaker Trucking & Excavating	$30,943.68	11/15/90
Shumaker Trucking & Excavating	$44,103.48	1/10/90 (Final)

3.12 Substantial Completion

The Certificate for Substantial Completion was issued effective December 15, 1990. Final AMRB project approval was delayed pending a final inspection. The final inspection was completed on February 12, 1991, and the project officially approved for close out. A copy of the Certificate for Substantial Completion is included in Attachment 4.

3.13 Final Project Cost

The final cost of the project, including Change Order adjustments, was $137,497.50.

4. CONSTRUCTION

4.1 Description of Project Plan

The purpose of the project plan was to reclaim disturbances from past coal mining activity at eight project sites southeast of Great Falls in Cascade County, Montana: the Centerville site, the Chicken Coulee site, the Cottonwood Creek site, the Neil Creek site, the McKamey Ranch site, the Number Five Coulee site, the Tracy site and the Miners Centennial Park Well. Supplementary work was added to the project and approved by Change Order, including the addition of the Lorang site and the Johnson Field site.

The remedial objective of the reclamation design was site specific and determined by the nature of the mining disturbance. The major items of work performed on this project included topsoil removal and replacement, preparation of spoils deposition areas, closing adits with riprap seals, disposal of mine spoils and debris, installation of drainage structures, construction of an infiltration pond, site revegetation and fence installation. The project plans also included the construction of a water well and neutralization of acidic soils.

4.2 Major Equipment List

The following equipment was used by the Contractor or the Subcontractor to complete the project requirements:

Type	Make/Model	No. on Job
Dozers	Caterpillar D6-C	1
Dozers w/bucket	Caterpillar 977-K	1
Backhoe	Case 580	1
Front-end Loader	Caterpillar 966-C	1
Farm Tractor	Case 955	1
Grain Drill	6' Brillion	1
Farm Tractor	John Deere	1
Hay Blower	Vermeer Haybuster	1
Rotary-Air Well Drill	Gardner Denver HPS	1
900 CFM Compressor	Ingersoll-Rand XHP-900-w-Cat	1

4.3 Contractor Employees

During reclamation activities Shumaker Trucking & Excavating employed 3 to 7 men, depending on the nature of the work, including: 1-supervisor, 2-equipment operators, 2-laborers, and 2-truck drivers.

The well drilling subcontractor, Boland Drilling of Great Falls, MT, utilized 2 men: 1-equipment operator/supervisor and 1-equipment operator/laborer.

4.4 Construction Activities

Cottonwood Creek Site

Construction activities commenced at the Cottonwood Creek site on August 6, 1990. The contractor proceeded to demolish the remnants of the mule barn and dispose of the debris in the designated location above the ranch buildings. Two dump trucks were used to haul the wood and stone debris to the disposal site. Following demolition and disposal of the mule barn, powder magazine and other mine related structures, reclamation of the adit and waste pile proceeded. The adit was probed, a drain system installed

and the adit opening adequately sealed. Following spoils removal, lime was applied over the waste removal and deposition area. Ten tons of lime were incorporated and topsoil replaced on a .36 acre area. Fence was constructed on August 22. Fertilizer application, seeding and mulching was subsequently completed on October 23, 1990.

McKamey Ranch Site

Concurrent with construction at the Cottonwood Creek site, adit closures were completed at the McKamey Ranch site. The contractor employed two laborers to hand-lay riprap in four open adits. The riprap was generated on site with steel pry-bars. No other work was required at this reclamation site.

Neil Creek

Work proceeded at the Neil Creek site immediately following completion of the adit closures at McKamey Ranch. On August 8, 1990 two laborers were utilized to close two adit openings with hand-laid riprap. The riprap was produced on site with pry-bars. No other work was required at the Neil Creek site.

Chicken Coulee

The contractor mobilized equipment to the Chicken Coulee reclamation site on August 13, 1990. The landowner limited equipment to two 4-wheel drive trucks and two rubber-tired pieces of equipment. The landowner also specified a two-day work limit for completion of the site reclamation. These requests were made due to the extremely rough access, spring activity across the access road and past trespassing problems.

Reclamation of the site proceeded with removal and stockpile of coversoil from the adit cut and subsidence area. The two areas were enlarged to allow deposition of the spoils pile. After disposal of the spoils, lime was applied and incorporated over the disposal site, devegetated areas and areas formerly covered by spoils. An evaporation basin was also constructed to impound the seasonal drainage from the seeps on the adjacent slopes. Topsoil was replaced on all disturbed areas and equipment removed from the site on August 14. Fencing was completed concurrently with the fertilizing, seeding and mulching on October 22, 1990.

Number Five Coulee

The objective of the Number Five Coulee site was to close open adits and dispose of waste piles at three abandoned mine sites. Work began at this reclamation site on August 15, 1990.

Number Five Coulee south sites consisted of two prospects. After probing the adits to determine the extent of the openings, no adit closure was considered necessary. Coversoil was removed and stockpiled at each prospect and deposition areas excavated to accommodate the waste pile disposal. Lime was delivered to the site and incorporated at a rate of 21.5 T/A. Topsoil was replaced over the disturbed areas and the equipment mobilized to the Number Five Coulee north sites approximately one mile away. Fencing was subsequently completed and fertilizer, seed, and mulch applied on October 25, 1990.

Work at the north site proceeded with closure of seven prospect openings with hand-laid riprap. A disposal area was excavated at the base of the largest spoil pile and the excavated material stockpiled separately into topsoil and coversoil piles. All spoils were disposed of in the disposal area and 20 T/A lime incorporated on the .25 acre site. Coversoil followed by the topsoil was replaced and graded to conform with the adjacent slopes. Seedbed preparation, fertilizing, seeding, and mulching was completed on October 26, and 743 LF of fence erected around the site.

Centerville Sites

The contractor mobilized equipment to the Centerville sites on October 21 and began reclamation of the southern-most mine. A disposal site was constructed at the base of the pile and the excavated soil stockpiled separately into topsoil and coversoil piles. A large subsidence above the adit was also excavated and the adit opening enlarged to accommodate spoil disposal. Approximately 900 cubic yards of coal waste was dozed into the prepared disposal areas and lime incorporated at 10 T/A. Coversoil and topsoil was replaced and graded to conform to the adjacent contours.

Similarly, reclamation proceeded at the other five mines sites. At each mine a disposal site was excavated and the spoils dozed into the prepared deposition area. A common disposal area was constructed to facilitate spoils removal at the three north sites and to provide an adequate coversoil source. Spoils were hauled to the common disposal area by truck. During this period, on August 24, the landowner instructed that a particular mine be omitted from reclamation due to the location and terrain. The mine is situated at the head of a short, steep drainage and is not visible from the road. An open adit in the same location was hand closed with riprap, otherwise the landowner's instructions were observed. Lime was incorporated at the specified rate of 10 T/A and coversoil replaced. Fertilizing, seeding, and mulching was completed on October 31 and 4,451 LF of fence constructed.

Tracy Site

Equipment proceeded to the Tracy site on August 28, 1990. The objectives at this site involved the disposal of debris and waste piles, closure of an open adit and construction of an adit drainage system with retention pond.

Reclamation work began with preparation of the adit and subsidence for closure. The subsidence was excavated and spoils placed in the hole. The adit was closed with hand-laid riprap.

At the main mine site, work involved in the construction of the adit drainage system included: installation of a riprap pad, 250 gallon stock tank and overflow system at the outfall; excavation and embankment construction of the retention pond; trench excavation and installation of 4" diameter SDR 35 PVC pipe as an outfall; construction of the inlet filtration and collection system and, as specified in Change Order No. 2, installation of an auxiliary 1,000 gallon stock tank with piping and valves.

Following construction of the drainage system, the adit area was prepared for spoil disposal over the infiltration-collection pipe. The spoils were dozed into the cut and graded to conform with natural contours. Lime was incorporated over the site at 10 T/A and topsoil replaced on disturbed areas. Fertilizing, seeding, and mulching of the site was completed on November 2 and 1,221 LF of fence constructed.

Miners Centennial Park Well

The Centennial Park Well was constructed in Centerville by Boland Drilling of Great Falls, Montana. Drilling was scheduled to begin on November 1, 1990 but delays created by equipment problems prevented work from beginning until November 8.

The contractor drilled a 12.25" hole to accommodate the 8" steel casing and allow a 2" annulus for grouting. It was mutually agreed that the steel-cased, 12" hole would be extended to a minimum of 10' into the Madison Limestone formation and the remainder of the well would be cased with 6" nominal blank casing and screen. The minimum depth was reached at 140' on November 8 and the steel casing installed. Grouting of the annulus was completed on November 12 and a 36 hour curing time stipulated prior to allowing drilling to continue. Drilling resumed at 140' with an uncased 8" hole. Sporadic loss of circulation occurred from 148' to 188', then total loss of circulation was experienced to 201'. This was presumed to be caused by large cavities and numerous voids. The contractor elected to grout the hole to fill the voids prior to further drilling. Well development was performed to determine if an aquifer had been encountered

but circulation remained inconsistent. Approximately 7 cubic yards of grout was required to fill the 8" well. After a 24 hour curing period, drilling resumed to remove the cement grout from the hole. Circulation was restored sufficiently to continue drilling but the peculiar absence of grout cuttings from the circulation was noted from 160' to 180'. Speculation was that a heavy water bearing strata existed in the voids zone and the grout had been washed away. Well development was performed to determine the yield of the well at the 200' depth and yield consistently measured at 20 gpm. Drilling was allowed to continue to the 280' depth where a large volume of water was encountered. Well development and measurements detected a yield estimated at 100 gpm. The driller was instructed to extend the well to 300' and complete a four hour well development at that depth. Yield estimates were determined to exceed 150 gpm during this period. The drill stem was removed from the well and the static water level measured at 168'. Preparations were made to complete the pump installation and perform a 24 hour yield and draw down test.

On November 27, a 6" Schedule 40 PVC liner with attached stainless steel screen was installed in the well. A 10' PVC blank was set from 292' to 302' and the 20' screen installed from 292' to 273'. Following a successful casing alignment test, the pump was installed with the intake ports set between 271' to 272', just above the top of the screen. Pump installation was completed on December 4 and the 24 hour yield and drawdown test started. Additional draw down information was supplied from selected observation wells located at the Centerville High School, the Centerville Community Water Users Associations well and the St. Pius X church well. Data obtained from the pump test and observation well measurements is included in Attachment 7. Following completion of the pump test, installation of the pitless adapter, exterior piping and valves and the landscaping was completed. Substantial site completion was December 15, 1990. A well log was submitted to the DNRC as required by State law and is also included in Attachment 7.

Lorang Site

The Lorang mine was additional work incorporated into the Cascade Small Prospect Project by Change Order No. 2. The site consisted of an open adit and small, partially revegetated spoils pile. The objective of this site was to seal the adit. To accomplish this objective, several loads of field rock were hauled from a cultivated field approximately one mile away. The adit was closed by hand laid riprap. No further work was required at this site.

Johnson Field Neutralization

The Johnson Field site was additional work included by Change Order No. 2. The site is a part of a cultivated field that is situated below recently reclaimed mine drainage sites. Mine drainage accumulation had adversely affected the productivity of the field by lowering the pH levels of the soil. The remedial objective at this site was to neutralize the acidic areas of the field through the application and incorporation of 35 T/A lime. The reclamation area was determined by gridding an area 500' x 1450' into eight 2 acre grids. The grids were each soil sampled separately and tested for pH and soluble salts. The results of the tests are in Attachment 6. The low pH area was then delineated and lime applied and incorporated. Approximately 8 acres were determined to be affected with pH values from 4.1 to 4.5. Lime supplied by Montana Limestone Company, Warren, MT was delivered and spread by the contractor. Each load was sampled and analyzed for gradation and calcium carbonate equivalent. Technical specifications 301.02 A & B directs that if the actual gradation is more than 3% below specification, the contractor shall make up the difference. Of the 280 tons of pure lime required on the site, the effective amount delivered and incorporated was 252.59 tons. Inclement weather conditions prevented the contractor from supplying the additional 27.41 tons required so a deduction from the contract amount was authorized for $1,644.60. This deduction is reflected on Change Order No. 3. Analysis of the lime supplied to the project is included in Attachment 6.

4.5 Quantities Used

The following is a list of actual quantities used (major components) to complete the project:

Item	Amount
Mobilization, Bonding & Insurance	1.0 LS
Cover Soil	4,830 CY
Probe Collapsed Adit	4 EA
Adit Seal	16 EA
Waste Pile Disposal <300'	4,433 CY
Waste Pile Disposal >300'	350 CY
Debris and Structure Removal	1,483 CY
Rock Wall Removal	288 CY
Adit Drainage System	2 EA
Provide Water	22,700 Gal
Lime	86.5 Ton
Fertilize, Seed, Mulch	8.0 AC
Farm Fence	9,869 LF
Dike Embankment	410 CY
Set up and Removal	1.0 LS
Drill for 8" I.D. Casing	300 LF
Furnish and Install 8" Casing	300 LF
Furnish and Install Well Screen	20 LF
Surge and Develop Well < 6 hrs.	1.0 LS
Surge and Develop Well > 6 hrs.	6 Hrs
Test Pump < 6 hrs.	1.0 LS
Test Pump > 6 hrs.	24 Hrs.
Furnish and Install Steel Cap	1.0 EA
Seal Grout	1.0 LS
Underground Power Source	175 LF
Drop Pipe, Water Level Tube, Cable	280 LF
Pitless Adapter, Check Valve	1 EA
Exterior Pipe, Valves	1.0 LS
Submersible Pump	1.0 LS

5. PROJECT SUMMARY

5.1 Summary of Project

The Cascade County Small Prospects AMR project was awarded to Shumaker Trucking and Excavating of Great Falls, MT on July 29, 1990. Project construction was initiated on August 8, 1990 and proceeded on schedule until September 15. At this time, the temporary work shutdown requested by the contractor went into effect. This shutdown was allowed to provide the contractor with a 30 day hiatus in the contract time until the October 15 seeding date. Construction of the Miners Centennial Park Well was also scheduled to begin at that time. Seeding and mulching of all sites was completed on November 2. The well was substantially finished on December 15, 1990

The purpose of the Cascade Small Prospects AMR Project was to mitigate the effects of past coal mining activity by reducing environmental impacts, eliminating potential hazards and restoring sites to a natural condition. The Contractor accomplished these objectives by providing effective supervision, a competent work force and sufficient equipment to satisfy the requirements of the reclamation design. Spoil disposal, lime application, topsoil replacement and site revegetation proceeded in a well-organized, systematic manner. Project supervision was attentive to individual site requirements and was cooperative through the duration of the contract.

Job costs were within the scope of the contract and were well-controlled. Change Order items for additional work affected the final project costs but remained reasonable for the work performed.

The Final AMRB site inspection was completed on February 12, 1991 to field-verify proper completion of the project. The delay between Substantial Completion and Final Inspection was caused by inclement weather conditions.

5.2 Summary of Project Costs

5.2.1 Change Orders

The original contract price for this project was $148,336.46. Three Change Orders were authorized and approved that adjusted this price. Change Order No. 1 deleted Centerville 'C' Reclamation Site - Schedule VIII - from the project, reducing the contract cost by $28,715.40 and contract time by 24 calendar days.

Change Order No. 2 allowed for additional work to progress on the Lorang Reclamation Site and added improvements on the Tracy Site as requested by the landowner. The contract price was increased by $5,670.00 on Change Order No. 2.

Change Order No. 3 authorized the repair of a residential water problem alleged to have been caused by a past reclamation project. The cost of this concession was $500.00. Change Order No. 3 also provided for additional work to be performed on a soil neutralization project near Tracy. The cost of the work with subsequent quantity adjustment was $15,155.40. Also, Change Order No. 3 included quantity adjustments in order to close out the contract. Quantity adjustments resulted in a cost reduction of $3,448.96. The grand total of Change Order No. 3 was a price increase of $12,206.44.

The original contract cost for the Cascade County Small Prospect AMR Project was $148,336.46; final contract cost was $137,497.50, reduced with Change Order adjustments by $10,838.96. Total Change Order Costs were 7.31% of original construction costs.

5.2.2 Cost Per Bid Item

Item	Unit	Total Quantity	Total Cost	Cost Per Unit
1. Coversoil Remove & Replace	CY	4,830	$10,403.75	$2.15/CY
2. Probe collapsed adit	EA	4	$420.00	$105.00/EA
3. Adit closures	EA	16	$9,850.00	$615.63/EA
4. Waste pile disposal	CY	4,783	$9,199.50	$1.92/CY
5. Debris removal	CY	1,771	$7,076.25	$4.00/CY
6. Lime	TON	86.5	$5,942.50	$68.70/T
7. Fertilizer, Seed, Mulch	ACRE	8	$12,700.00	$1,587.50/AC
8. Provide water	GAL	22,700	$567.50	$.025/GAL
9. Farm fence	LF	9,869	$12,320.00	$1.25/LF
10. Adit drainage systems	EA	2	$2,100.00	$1,050.00/EA

5.2.3 Cost Per Site

The total cost for each reclamation site included on this project is listed below:

Site Name	Amount
Centerville Site	$23,797.20
Chicken Coulee Site	$13,201.30
Cottonwood Creek Site	$12,874.75
McKamey Ranch Site	$ 3,000.00
Neil Creek Site	$ 1,500.00
Number Five Coulee Site	$13,927.05
Tracy Reclamation Site	$15,909.20
Miners Centennial Well Site	$35,132.60
Johnson Field Neutralization (C.O. No. 3)	$15,155.40
Lorang Site (C.O. No. 2)	$ 2,500.00

5.2.4 Analysis of Consultant Costs Incurred vs. Actual Construction Costs

Construction time for this project was set at 96 calendar days. The contractor utilized the allotted time to complete the project. This created an increase in inspection time and expense. Refer to Attachment 8 for an analysis of costs.

5.3 Site Conditions after Completion

Immediately following the project seeding and mulching, all sites were judged to be in a satisfactory condition. During the well construction at the Miners Centennial Park gusty winds were prevalent and could have adverse effects on the mulching of the exposed sites. Due to winter conditions, the Final AMRB site inspection was not completed until February 12, 1991. Sites were in remarkably good condition, showing no signs of erosion or mulch problems.

5.4 As-Built Drawings

The As-Built drawings are included in Attachment 6.

5.5 Maintenance or Follow-up

The inspection conducted on February 12, 1991 indicated that additional work on the sites was not required. A follow-up inspection is recommended to determine seeding success and prepare a maintenance recommendation.

A weed control plan was submitted to the Cascade County Weed Control Board for approval and is included in Attachment 5.

6. COMMENTS/SUGGESTIONS

The problems encountered on the reclamation construction of the Cascade Small Prospects were related to interpretation of a set of plans and specifications prepared by one consultant and implemented by another. The reclamation requirements, design details, and construction methods specified on the plans by the design consultant were different than those commonly employed by the construction consultant. Field modifications were routinely made to adapt the actual site conditions to the presumed intent of the plans and specifications. Certain modifications included relocation of waste pile deposition areas to accommodate equipment operation; realignment of seepage collectors to improve drainage interception; lime application rate adjustments; augmenting the stock water source at the Tracy Site by installing a 1,000 gallon auxiliary

tank and enlarging the size of the proposed tank; and modification of the well specification at the Centennial Park to conform to materials that are readily available in Montana.

The problems experienced with interpreting and implementing another consultant's design during construction would be resolved with a standardization of plans and specifications on AMRB projects. Standardizing is currently being pursued by AMRB and the standard plans and specifications should be available for 1991 construction. The Cascade Small Prospects project was an example of the difficulties encountered without the continuity of established reclamation standards. The problems on the Cascade County project remained minor and were easily resolved due to the cooperative manner of the responsible parties. As a result, the project was satisfactorily completed in accordance with the standards expected by DSL-AMRB.

CHANGE ORDERS

CHANGE ORDER

ORDER NO: 1

PROJECT TITLE: Cascade County Small Prospects

MONT A/E or DSL-AMRB: 90-012

CONTRACT DATE: 7/27/90 (AOM 8/6/90)

OWNER: Abandoned Mine Reclamation Bureau, Montana Dept. of State Lands

CONTRACTOR: Shumaker Trucking and Excavating Contractors, Inc.

Change Orders must be accompanied by an itemized cost breakdown. You are hereby requested to comply with the following changes from the Contract Documents. (Show separate costs for materials, labor, equipment, and miscellaneous. Show percent where applicable.)

ITEM NO.	DESCRIPTION OF CHANGES - ESTIMATED QUANTITIES & UNITS	COST OF CHANGES					TOTAL COST
		MAT'LS.	LABOR	EQUIP.	MISC.	TOTAL UNIT COST	
1.	Delete - Schedule VIII - Centerville "C" Site					$28,715.40	$28,715.40
	TOTAL COST - MATERIALS, LABOR, EQUIPMENT & MISC.						$ 28,715.40
	OVERHEAD & PROFIT @ 0 %						--
	GRAND TOTAL - THIS CHANGE ORDER						$ 28,715.40

Original Contract Price	$148,336.46
Current Contract Price Adjusted by Previous Change Order	148,336.46
Cost this Change Order (+ or (-))	28,715.40
New Contract Price including this Change Order	$119,621.06

The completion date as set forth in the Contract Documents shall be (~~unchanged, increased~~, decreased) by 24 calendar days.

The date for completion of all work will be 11/10/90.

Description and Justification for Change:

1. Delete Centerville "C" Reclamation Site - Schedule VIII.

   $28,715.40 (VIII)/$148,336.46 (Total Base Bid) equals approx. 20%.
   120 days - 20% = 96 days remaining.

SURETY CONSENT

The Surety hereby consents to the aforementioned Contract Change Order and agrees that its bond or bonds shall apply and extend to the Contract as thereby modified or amended per this Change Order. The Principal and the Surety further agree that on or after execution of this consent, the penalty of the applicable Performance Bonds or Bonds is hereby decreased by $ 28,715.40 (100% of the Change Order amount) and the penalty of the applicable Labor and Material Bond or Bonds is hereby decreased $ 28,715.40 (100% of the Change Order amount).

CHANGE ORDER

ORDER NO: 2

PROJECT TITLE: Cascade County Small Prospects

MONT A/E or DSL-AMRB: 90-012

CONTRACT DATE: 7/27/90

OWNER: Abandoned Mine Reclamation Bureau, Montana Dept. of State Lands

CONTRACTOR: Shumaker Trucking and Excavating Contractors, Inc.

Change Orders must be accompanied by an itemized cost breakdown. You are hereby requested to comply with the following changes from the Contract Documents. (Show separate costs for materials, labor, equipment, and miscellaneous. Show percent where applicable.)

ITEM NO.	DESCRIPTION OF CHANGES - ESTIMATED QUANTITIES & UNITS	COST OF CHANGES					TOTAL COST
		MAT'LS.	LABOR	EQUIP.	MISC.	TOTAL UNIT COST	
1.	Install a 1,000 gallon stock tank, provide pipe, gate valves, and necessary appurtenances.					$3,170.00	$3,170.00
2.	Close and seal open adit with riprap.					2,500.00	2,500.00
	TOTAL COST - MATERIALS, LABOR, EQUIPMENT & MISC.						$ 5,670.00
	OVERHEAD & PROFIT @ 0 %						--
	GRAND TOTAL - THIS CHANGE ORDER						$ 5,670.00

Original Contract Price	$148,336.46
Current Contract Price Adjusted by Previous Change Order	119,621.06
Cost this Change Order (+ or -)	5,670.00
New Contract Price including this Change Order	$125,291.06

The completion date as set forth in the Contract Documents shall be (unchanged, ~~increased, decreased~~) by 24 calendar days.

The date for completion of all work will be 11/10/90.

Description and Justification for Change:

1. Install 1,000 gallon stock tank, including pipe, pipe trenching, gate valves, and necessary appurtenances. This is a field design revision conducted at the Tracy site.

2. Close and seal open adit with riprap. This is an additional site found on the Lorange property.

SURETY CONSENT

The Surety hereby consents to the aforementioned Contract Change Order and agrees that its bond or bonds shall apply and extend to the Contract as thereby modified or amended per this Change Order. The Principal and the Surety further agree that on or after execution of this consent, the penalty of the applicable Performance Bonds or Bonds is hereby increased by $ 5,670 (100% of the Change Order amount) and the penalty of the applicable Labor and Material Bond or Bonds is hereby increased by $ 5,670 (100% of the Change Order amount).

PRECONSTRUCTION CONFERENCE AGENDA

Project: Cascade County Small Prospects Project

Date: July 30, 1990 Time: 1:00 p.m.

Location: Centerville Park, Centerville, Montana

AMRB Representatives: Dale Herbort, Reclamation Specialist

Attendees: *(Sign in on sheet)*

Discussion

- **Project Organization:**

  DSL Abandoned Mine Reclamation Bureau: Dale Herbort

  Engineer: Robert Peccia & Associates: Robert Morton, Project Manager
  Dale Wells, Inspector

  Contractor: Shumaker Trucking:

  Subcontractors:

  Other representatives:

- **Purpose of Meeting**

  - Introduce and designate responsible personnel
  - Establish working relationship
  - Discuss project requirements

- **Contractor's Tentative Schedule**

  - Contract Time — Start Date AUGUST 6 1990
    Completion Date

  - Normal Work Week

- **Contractor's Submittals**
  - Construction schedules
  - Traffic Plan
  - Lime, seed, fertilizer, and mulch certifications (if applicable)
  - Other Technical Specification sections
  - Substitutions
- **Applications for Payment**
  - Review of General Conditions
  - Review of Measurement and Payment
  - Materials on site
- **Specific DSL Requirements and Procedures**
  - Interim inspections
  - Safety meetings
  - Certified payrolls —
- **Critical Work Sequencing**
  - Material ordering and delivery
  - Liming, topsoiling, and seeding (if applicable)
- **Field Decisions, Work Directives, and Change Orders**
  - Review of General Conditions
- **Use of Premises, Storage Areas, Security, Field Office**
- **Contractor's Assignments for Safety and First Aid**
  - Review Safety Standards, Special Provisions
- **Progress Meetings**
- **Inspection and Testing**
  - Review General Conditions
- **Comments by Other Representatives**
  - DSL Abandoned Mine Reclamation Bureau
  - Others
- **Distribution of Additional Sets of Specifications and Plans to Contractor**

(Note: A copy of Preconstruction Meeting summary to be mailed to all participants.)

CASCADE COUNTY SMALL PROSPECTS AMR
DSL-AMRB 90-012

August 3, 1990

MEMORANDUM

To: All Participants

Re: Summary of Preconstruction Conference

The Preconstruction Conference for the Cascade County Small Prospects AMR Project convened at 1:00 p.m. on Monday, July 30, 1990. The following individuals were in attendance:

Robert Morton, Robert Peccia & Associates
Dale Wells, Robert Peccia & Associates
Joe Aline, Shumaker Trucking
Jim Thoroughman, Shumaker Trucking
Dale Herbort, Abandoned Mine Reclamation Bureau
Doug Schwind, Hydrometrics

Following introduction and designation of key personnel, the subject of contract time was discussed. Robert Morton, Project Manager, announced that reclamation site "Centerville C" had been dropped from the project. Consequently, contract time would be reduced to an amount proportionate to the reclamation cost of the site. A change order to reduce contract time from 120 days to 96 days was introduced.

Joe Aline, Shumaker Trucking, voiced his opposition to the change order and objected emphatically to the contract time reduction. Shumaker Trucking challenged the motive of the time reduction and argued that their price for the project was based on the 120-day contract duration to coincide with their other commitments.

Robert Morton contended that contract time was already excessive and with the reduction of work, a reduction in time was justifiable; additional cost to the Department of State Lands (DSL) in extra inspection was an unnecessary expense considering the size of the project. A 20% time reduction for a 20% decrease in project work based on cost was an equitable solution. He added that the Contractor would expect additional time for a work increase so we expect the same consideration. Dale Herbort, DSL, agreed with the argument that 120 days was too long for the amount of work required

on this project. Doug Schwind, Hydrometrics, remarked that the original contract time was set at 120 days due to site conditions (seasonally wet) of the Chicken Coulee reclamation site and as a consideration to the landowner's concerns regarding access problems. He felt the contract time was reasonable.

Dale Herbort suggested negotiating a compromise to the solution. Joe Aline preferred a 30-day shutdown after earthwork to be followed by seeding after October 15. This was a satisfactory compromise so the change order was delivered to Shumaker Trucking for approval pending review by Gene Shumaker.

The Preconstruction Conference continued with a review and discussion of pertinent topics:

- Submittals required prior to project start-up, including work schedule, limestone analysis, and pipe certifications.
- Material substitutions require prior approval.
- Discussion of applications for payment; quantities to be agreed on between Project Superintendent, Jim Thoroughman, and Resident Inspector, Dale Wells.
- DSL procedures; on-site meeting with Dale Herbort approximately every two weeks.
- Safety; Contractor's responsibility, OSHA standards.
- Critical work sequence, primarily involves well drilling and reclamation at Chicken Coulee.
- Change order procedures, including defining of work directives and field changes.
- Blasting requirements; all personnel required to be licensed; insurance.
- Pay and progress meetings - every two weeks with DSL plus non-scheduled visits.
- Testing requirements.

The conference concluded with individual site visits and reviews of Centerville North and South, Number Five Coulee, and Cottonwood Creek reclamation sites. The conference concluded at 4:00 p.m. with a schedule construction start-up of August 6.

Any corrections or additions to these minutes are welcome.

CERTIFICATE OF SUBSTANTIAL COMPLETION

TO: Abandoned Mine Reclamation Bureau, MT Dept. of State Lands OWNER

PROJECT TITLE: Cascade County Small Prospects AMR Project

MONT A/E or DSL-AMRB: 90-012

CONTRACT DATE: 7/27/90

LOCATION: Cascade County, Montana

PROJECT OR PART SHALL INCLUDE: Nine work schedules and three change orders

CONTRACTOR: Shumaker Trucking & Exc.

ADDRESS: P.O. Box 1442
Great Falls, MT 59403

TELEPHONE NO: 406/727-3537

SUBSTANTIAL COMPLETION DATE: 12/15/90

DSL INSPECTION DATE: 1/91

ENGINEER: Robert Peccia & Associates
Helena, MT

PERFORMANCE BOND NO: 400JC8461

DATE OF BOND: 6/29/90

SURETY: St. Paul Mercury Insurance Co.

MONTANA AGENT: Cogswell Agency

ADDRESS: P.O. Box 2009
Great Falls, MT 59403

The Work performed under this Contract has been inspected by authorized representatives of the Owner, Contractor, and Engineer, and the Project (or specified part of the Project, as indicated above) is hereby declared to be substantially completed on the above date.

DEFINITION OF SUBSTANTIAL COMPLETION

The date of substantial completion of a project or specified area of a project is the date when the construction is sufficiently completed, in accordance with the contract documents, as modified by any change orders agreed to by the parties, so the Owner can occupy or utilize the project or specified area of the project for the use for which it was intended.

A tentative list of items to be completed is appended hereto. This list may not be exhaustive, and the failure to include an item on it does not alter the responsibility of the Contractor to complete all the Work in accordance with the Contract Documents.

ENGINEER: ROBERT PECCIA & ASSOC.

By Robert B Morton 1/18/91
Authorized Representative Date

The Contractor accepts the above Certificate of Substantial Completion and agrees to complete and correct the items on the tentative list within the time indicated.

CONTRACTOR: Shumaker Trucking & Excavating Contractors, Inc.

WEED CONTROL PLAN

Cascade County Small Prospects Project

The Department of State Lands, Abandoned Mine Reclamation (AMR) Bureau hereby submits this Weed Control Plan to the Cascade County Weed Control Board as required by the Montana County Noxious Weed Management Act. Rule 7-22-2121, New Section C (3) (a) states, "The person or agency disturbing the land shall submit to the board a written plan specifying the methods to be used to accomplish revegetation. The plan must describe the time and method of seeding, fertilization practices, recommended plan species, use of weed-free seed, and weed management procedures to be used."

The attached Invitation For Bid package, DSL-AMRB 90-012, covers most of the above requirements under the following sections: (1) Section IV, Special Provisions, Subsection 5.14, Soil Amendments, Seedbed Preparation, and Seed Mix; and (2) Standard Specifications, Subsection 320.00 Fertilizing and Seeding, and Subsection 330.00 Mulch.

Upon completion of the Cascade County Small Prospects Project, the Bureau will continue to monitor the site biannually for any further abandoned mine hazards and any growth of noxious weeds. If any noxious weeds listed by the Cascade County Weed District appear on the reclamation site, the County Weed Supervisor will be notified immediately.

The most effective method of control will be implemented according to the District's noxious weed program. The AMR Program assumes responsibility for weed control on all AMR sites during reclamation construction and for one year after the date of reclamation completion. After one year the weed control responsibility reverts back to the deeded landowner.

The Weed Control Plan for the Cascade County Small Prospects Project is officially approved and in effect until one year after the completion of the reclamation construction when executed by the following officials.

RE: Cascade County Small Prospects AMR Project,
DSL AMRB 90-012

Dear Gene:

As you know, we have sampled and analyzed the lime delivered to the Johnson field site of the project. Enclosed is a copy of the analysis results. From this analysis only samples #8, #9, and #11 pass the gradation specifications without requiring additional lime to make up for the sieve size deficiency. Technical specifications 301.02.A&B indicates that if the actual size is more than 3% below submitted value the contractor shall make up the difference with additional lime. Most loads fell short of the required 100% passing the No. 60 sieve size.

To determine the additional quantity of lime to be added to the site per the contract, we have developed the attached table.

Of the 308.19 tons of lime you delivered, 55.6 tons would not pass specifications. Therefore, the effective amount delivered is 252.59 tons. The total amount of pure lime to be applied (280 tons) and the effective amount delivered to date (252.59 tons) yields a deficit of 27.41 tons. Derating for purity (95.3%), the additional amount to be delivered is 28.76 tons (assuming the additional amount meets the specified gradation).

Please contact me when you plan to deliver and apply the remaining lime. We will need to observe placement and take a sample to verify sieve size.

Contact me with any questions.

Sincerely,
ROBERT PECCIA & ASSOCIATES

Form No. 603 (R 6-87)

File No. _____

MAR 1 ; 1991

WELL LOG REPORT

State law requires that this form be filed by the water well driller within 60 days after completion of the well.

ROBERT PECCIA & ASSOCIATES

1. WELL OWNER
Name Miners Centenial Park Board

2. CURRENT MAILING ADDRESS
C/O Judie Guisti P.O. Box 93
Sand Coulee, MT 59472

3. WELL LOCATION
County Cascade
Township 19 (N)S Range 5 (E)W
NW 1/4 NE 1/4 Section 19
Lot _____ Block _____
Subdivision _____
Tract Number _____

4. PROPOSED USE Domestic ☐ Stock ☐ Irrigation ☒
Other ☐ specify _____

5. DRILLING METHOD _____ cable, X air rotary, _____ forward rotary, _____ reverse rotary, _____ jetted, _____ other (specify) _____

6. WELL LOG

Depth (ft.) From	To	Formation
0'	5'	Topsoil, Sand
5	36	Sand & Clay
36	45	Broken Sandstone & Gravel
45	70	Gray Silt
70	73	Gravel & Sand
73	117	Brown & Gray Silt
117	129	Broken Limestone
129	300	White & Yellow Limestone

7. WELL CONSTRUCTION AND COMPLETION

Size of drilled hole	Size and PSI Rating of casing	From (feet)	To (feet)
12¼"	8" Steel .264 23.57 lbs per Foot	+2'	140'
8"	6" PVC sch 40	130'	270'
8"			
8"	6" PVC sch 40	290'	300'

Perforations _____ and/or Screen X

Kind Size	From (feet)	To (feet)
6" Stainless Steel .030 Slott	270'	290'

Was casing left open end? _____ Yes X No
Was a packer or seal used? _____ Yes X No
If so, what material _____
Was the well gravel packed? _____ Yes X No
To what depth was the well grouted? 140' ft
Material used in grouting Cement & Bentonite
Well head completion: Pitless adapter X Yes _____ No
Top casing 18 in. or greater above grade X Yes _____ No

8. WELL TEST DATA

The pump test information request in this section is required for all wells. All depth measurements shall be from the top of the well casing unless otherwise specified.

All wells under 100 gpm must be tested for a minimum of one hour and provide the fotlowing information:

a) Air _____ Pump X Bailer _____
b) Static water level immediately before testing 165' ft. If flowing; closed-in pressure _____ psi _____ gpm
Controlled by: _____ valve, _____ reducers, _____ other, (specify) _____
c) Depth at which pump is set for test 270'
d) The pumping rate and means of discharge (i.e., bailing, airlift, (pumping)) 100 gpm
e) Maximum drawdown during the test 1' ft
f) Duration of test: Pumping time 24 hrs
Recovery time 2 hrs
g) Recovery water level 165' ft
Amount of time after pumping recovery level water data was taken 2 hrs

Wells intended to yield 100 gpm or more shall be tested for a period of 8 hours or more. The test shall foltow the development of the well, and shall be conducted continuously at a constant discharge at least as great as the intended appropriation. In addition to the above information, water level data shall be collected and recorded on the Department's "Aquifer Test Data" form included in each packet of well logs.

NOTE: All wells shall be equipped with an access port ½ inch minimum or a pressure gauge that will indicate the shut-in pressure of a flowing well. Removable caps are acceptable as access ports.

9. WAS WELL PLUGGED OR ABANDONED? _____ Yes X No
If yes, how? _____

10. DATE COMPLETED 2-12-91

11. DRILLER/CONTRACTOR'S CERTIFICATION

This well was drilled under my jurisdiction and this report is true to the best of my knowledge.

3-4-91
